

The **iness** project is based on the management of 8 strongly interconnected and result oriented WORKSTREAMS.

Each WORKSTREAM is subdivided in WORKPACKAGES managed by high level representatives of Railways, Industries and Universities to deliver practical and efficient OUTPUTS.

**iness** is an EC FP7 project involving 30 partners including railways, industry & universities, joining efforts for standardisation in the framework of a business model reflecting a WIN/WIN situation between partners.

On the right track towards the definition & development of a common core of functional requirements for a new generation of interoperable interlocking systems:

- Suitable to be integrated in ERTMS
- Facilitating the migration
- Reducing the Life Cycle Cost of Installations
